SUMMARY

Detail-oriented **Backend Developer** with a strong foundation in **Python** and **Django/DRF**, specializing in building scalable and secure RESTful APIs. Demonstrated expertise in designing complex relational schemas with **MySQL**, implementing JWT authentication, and optimizing database queries. Proven ability to architect full-stack applications and eager to contribute technical skills to a high-performing backend development team.

EDUCATION

Vivekananda Institute Of Technology

Bachelor Of Technology, Major CSE

Jaipur, Rajasthan

Oct. 2022– Present

Senior Secondary

Science-Maths

Indragarh , Bundi, Rajasthan

June , 2021

EXPERIENCE

Next.js Developer(Part-Time)

Computatia.in

Sept. 2025 – Oct. 2025

VGU, Jaipur

- Transform the old user interface to new components using Next.js
- Engineered responsive React components using Next.js, transforming static lists into dynamic, visually appealing grid layouts with both Tailwind CSS and traditional CSS.
- Designed a new Navigation bar logic for small screen devices and implementation using Next.js
- Implemented precise CSS media queries to create adaptive UIs for specific devices, such as the Google Nest Hub (1024x600).

PROJECTS

E-commerce Backend (Django/DRF) : [Github](#)

Nov. 2025 - Present

- Built a Django 6 + DRF e-commerce API (products, collections, carts, orders, reviews) with JWT auth (Djoser + SimpleJWT) and custom user model (unique email).
- Designed relational schema (products, collections, customers, orders, order items, carts) on MySQL; enforced data integrity with FK protections and unique constraints; used signals to auto-create customer profiles on user registration.
- Implemented catalog filters/search/sort/pagination with django-filter and DRF pagination; optimized endpoints via select_related/prefetch_related to avoid N+1 queries.
- Secured admin/staff vs authenticated user permissions; restricted destructive operations on referenced products/collections.
- **Technologies:** Django 6, DRF, Djoser + SimpleJWT, django-filter, MySQL

FinDash - Full-Stack Personal Finance Dashboard : [Github](#)

July 2024 - Present

- **Architected and developed a complete RESTful API** using **Node.js** and **Express.js**, connecting to a **MySQL** database to handle all backend logic for user data, transactions, and savings goals.
- **Engineered a secure authentication system from the ground up**, implementing password hashing with **bcrypt** and session management using **JSON Web Tokens (JWT)** to protect all sensitive user endpoints.
- **Implemented SQL transactions** for critical operations, such as adding a new expense, to ensure data integrity by atomically updating both the **Transactions** and **Accounts** tables.
- **Built a dynamic and responsive multi-page frontend** with vanilla **JavaScript**, **HTML**, and **Tailwind CSS**, featuring interactive components like a live data chart, modals for data entry, and persistent user preferences.
- **Developed full CRUD (Create, Read, Update, Delete) functionality** for all core features, including transactions, savings goals, and user-managed credit cards.
- **Technologies:** Node.js, Express.js, JWT, bcrypt, MySQL

CERTIFICATES

Explore a Career in Front-End Web Development

July 2025

JavaScript Essential Training

July 2025

Explore Web Development With Node.js

Aug. 2025

TECHNICAL SKILLS

Languages: JavaScript, Python, C/C++, SQL, HTML/CSS

Frameworks: Node.js, Express.js, Django

Databases: MySQL

Developer Tools: Git, VS Code, Visual Studio, PyCharm

Libraries: Tailwind CSS
